FELV (Non-Adjuvant) (*Feline Leukemia*) (8 wks & over) **\$22**

♥ Pets should always receive an initial series of vaccinations, then boosters in one year. Thereafter, annual vaccinations or vaccinations every three years are recommended, depending on the type of vaccine and on the pet's environment. Ideally, pets should receive one of their sets of initial vaccines between 14 to 16 weeks of age to achieve the best immunity against disease. During your pet's initial vaccine series, do not wait longer than 6 weeks apart to have your pet vaccinated and do not vaccinate less than 2 weeks apart. All pets adopted from shelters should receive the appropriate vaccine boosters 1 month after adoption. ♥
